

# The Way It Was Meant To Be

## Hitachi 51" Digital 16:9 HDTV Monitor/Projection Television

The SWX Series is a superb blend of contemporary styling, unequalled performance and user convenience. By coordinating the design of all key components from source to screen, Hitachi delivers an ultra-bright, razor-sharp rendition of both high-definition and conventional content. The AV NET user interface provides on-screen 'heads-up' control and operation of external system components such as DVD players, VCRs and AV receivers. A DVI digital input accommodates newer-generation set-top boxes.

## Onkyo

Whether you're a newcomer to home theater or serious about your A/V experience, prepare to be impressed by the Onkyo TX-SR800. The latest formats, Dolby® Digital EX™, DTS®-ES™, DTS® 96/24 and THX® Surround EX™, are brought to you from 7.1-channels to give you the full 360° cinema experience. Power and build—some may say Onkyo has a fanatical devotion to bringing you the best-built receivers on the market, and we prove it with high quality, audiophile-grade parts and a rugged chassis to hold vibration down to an absolute minimum.

With the budget friendly DV-CP500, you'll find the same high build quality and progressive scan capability found in our high-end models at a fraction of the price. And its parallel video outputs make it easy to connect multiple TVs to give you video enjoyment in more than one room. The DV-CP500 can also play back your audio CDs—including high-resolution 96 kHz/24-bit audio discs—CD-R/RWs, Video CDs, and even MP3 CDs!

If you like music, and a lot of it, this 6-CD changer was made for you. It lets you change up to five discs during play, "cue up" the next song you want to hear without interrupting the song playing, and make up to 40-track programs. And since the DX-C380 is loaded with many of the same features found in Onkyo's high-end single CD players, like a high-quality single-bit D/A converter, 8 x over sampling, and Onkyo's exclusive jitter-eliminating Accu-Pulse Quartz System, you'll get all of your music delivered in phenomenal detail and clarity.

## Bell'o

AR-711

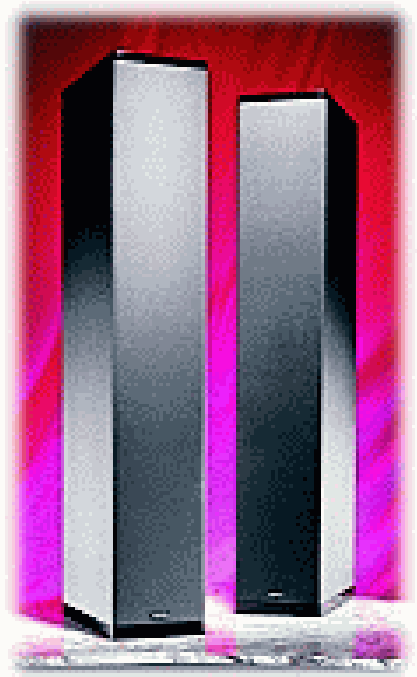

Metal and glass audio tower. Featuring four (4) fixed tempered safety glass shelves plus glass top, this tower can accommodate up to eight (8) audio/video components.

# Unreal Sound Clarity & Quality

All Definitive Bipolar Power Towers are specifically engineered for the finest audiophile music systems as well as for use as the main left and right front speakers (as well as rear and side speakers) in home theater systems of the highest quality. Experts agree that Definitive's bipolar power towers deliver absolute state-of-the-art performance, and our complete award-winning bipolar home theater systems that are based on them are clearly the best available.

The new **BP2004TL** builds on its illustrious predecessor's achievements. The original BP2004 was chosen as the high-end audio product-of-the-year in the Innovations Showcase Competition at the International Consumer Products Show. Now, with its all new 250-watt Infinite Power Source amplifier (double the power of the original) coupled to a new longer throw, larger voice coil, bigger magnet driver, the new BP2004TL achieves significantly deeper, tighter low-frequency performance and better overall sound quality. Its slightly larger cabinet combined with a new tuning program for computer synthesized transmission line loading also helps to deliver improved low frequency impact as well as better rhythm and slam for bass which is absolutely superior for both music and home theater.

Definitive has always led the industry with the best-sounding shielded center channels available. Optimum surround sound home theater reproduction places heavy demands on the center channel speaker, which in many respects is the main speaker in the system and often handles 50% or more of the program material. It is no place to compromise and settle for second best. Because of this, Definitive pioneered the concept of full frequency range high-definition center-channel speakers.

Definitive's bipolar surrounds are designed for easy and unobtrusive placement in your room. Easy-to-use mounting plates are included for wall mounting if desired. Positioning is extremely non-critical; unlike dipolar surrounds, which are limited by their specific sidewall placement requirements, Definitive's bipolars may be located on the sides or rear of the room (or both as in Dolby EX installations) or on the ceiling. They may be mounted on the rear wall (with their front drivers shooting towards each other and their rear drivers shooting toward the side walls) with excellent results.
